

There are people who design mines as games, EMERGENCY has created a hospital that can be assembled and disassembled as a Meccano in only 48 hours, but that grants the same rooms of an efficient and functional first aid centre.

An immediately operating building, quick to set-up and easy to convey wherever a new emergency requires it.

An important project carried out by means of avant-garde materials and technologies.

## Notes regarding ALP

The air distribution system inside the Emergency new hospital has been realized using ALP System aluminium pre-insulated ducts.

ALP System technology has been selected for its particular characteristics of durability, even in severe working conditions, for its lightness and especially for its quick assembly.
